# Five police campuses in Bengaluru to get 590 percolation wells

PTI | | Posted by Yamini C S  
Sep 07, 2024 09:28 AM IST

The initiative is a joint project of Mphasis, an IT firm and United Way Bengaluru, an NGO focusing on health, education and environmental sustainability.

Bengaluru City police Commissioner B Dayananda on Friday launched the "One Billion Drops" campaign in five police campuses to strengthen the metropolis' climate resilience.

As part of the "One Billion Drops" project, this year, 590 percolation wells will be constructed across these locations.

As part of the "One Billion Drops" project, this year, 590 percolation wells will be constructed across these locations.

The initiative is a joint project of Mphasis, an IT firm and United Way Bengaluru, an NGO focusing on health, education, environmental sustainability, rural development, and corporate volunteering.

The five police campuses chosen for the project include CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion.

Speaking at the event, the police Commissioner said, "Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance."

# 5 police campuses in Bengaluru to get 590 percolation wells

BENGALURU: Bengaluru City police Commissioner B Dayananda on Friday launched the "One Billion Drops" campaign in five police campuses to strengthen the metropolis' climate resilience.

As part of the "One Billion Drops" project, this year, 590 percolation wells will be constructed across these locations.

The initiative is a joint project of Mphasis, an IT firm and United Way Bengaluru, an NGO focusing on health, education, environmental sustainability, rural development, and corporate volunteering.

The five police campuses chosen for the project include CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion.

Speaking at the event, the police Commissioner said, "Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance." The "One Billion Drops" initiative addresses climate change-related issues through percolation wells designed to capture rainwater at the point of impact, said Rajesh Krishnan, CEO of United Way Bengaluru.

"This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring Bengaluru's water resources, replenishing groundwater, and maintaining soil moisture to support the city's green cover," added Krishnan.

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden, said Deepa Nagaraj, Senior Vice President and Head – ESG & CSR, Sparkle Innovation Ecosystem and Communications.

"In the coming years, the goal is to reach out to approximately 225,000 beneficiaries by creating 1,200 wells by 2026," added Nagaraj.

## Mphasis and United Way Bengaluru collaborate to Strengthen Bengaluru's Climate Resilience

- [Press Release](#)
- September 6, 2024

**September 6, 2024:** Once known as the Garden City, Bengaluru now faces the harsh realities of India's climate crisis, dealing with severe groundwater depletion, erratic rainfall, and a shrinking green cover. In response to these growing challenges, Mphasis, through its Corporate Social Responsibility (CSR) efforts, has partnered with United Way Bengaluru to drive an impactful campaign called "One Billion Drops".

Mphasis and United Way Bengaluru officially announced the launch of the "One Billion Drops" campaign with the construction of 590 percolation wells across five police campuses in Bengaluru, including CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion. The event was attended by the Commissioner of Police, Bangalore City, Mr. B Dayananda, who commended the initiative for its significant contribution to Bengaluru's water sustainability.

The "One Billion Drops" initiative addresses climate-change-related issues through percolation wells designed to capture rainwater at the point of impact. This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring Bengaluru's water resources, replenishing groundwater, and maintaining soil moisture to support the city's green cover.

“I wholeheartedly appreciate the proactive support of Mphasis and United Way of Bengaluru for coming forward to make our police campuses water-neutral through their CSR initiatives. Your commitment to sustainability is a shining example of community policing in action. Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance. Thank you for your invaluable partnership in this noble endeavour,” said B. Dayananda, Commissioner of Police, Bengaluru City.

“Our ongoing partnership with United Way Bengaluru has empowered us to address global environmental challenges like climate change while making significant strides in reviving the state’s biodiversity. The ‘One Billion Drops’ campaign remains a powerful initiative in rainwater conservation and sustainability, demonstrating our commitment to a greener future,” said Deepa Nagaraj, Senior Vice President and Head, ESG & CSR, Sparkle Innovation Ecosystem and Communications

“Rooted in a community-driven approach, the ‘One Billion Drops’ campaign represents a scalable and replicable model that promotes ecological sustainability and resilience against climate change. By harnessing the power of collaboration between corporate entities, NGOs and government bodies, this initiative is setting a new standard for climate action and water conservation,” said Rajesh Krishnan, CEO of United Way Bengaluru.

This initiative aligns seamlessly with the Prime Minister’s National Water Mission initiative, “Catch the Rain, Where it Falls, When it Falls.” Each percolation well can conserve up to 128,000 litres of rainwater annually, directly enhancing groundwater levels in their respective catchment areas.

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden. These percolation wells can conserve approximately 175,284 kilos of rainwater annually, making a significant contribution to the city’s water resources and environmental health. These wells have benefitted 251,000 members of the community. In the coming years, the goal is to reach out to approximately 225,000 beneficiaries by creating 1200 wells by 2026.

# Bengaluru Police Launch 'One Billion Drops' Campaign to Combat Climate Change

Bengaluru City Police Commissioner B Dayananda has inaugurated the 'One Billion Drops' campaign, focusing on climate resilience. The initiative, in collaboration with Mphasis and United Way Bengaluru, will see the construction of 590 percolation wells across five police campuses to aid in water conservation and flood prevention.

Devdiscourse News Desk | Bengaluru | India

Updated: 06-09-2024 19:37 IST | Created: 06-09-2024 19:37 IST

Bengaluru City Police Commissioner B Dayananda on Friday launched the 'One Billion Drops' campaign in five police campuses to strengthen the metropolis' climate resilience.

As part of the 'One Billion Drops' project, 590 percolation wells will be constructed this year across these locations.

The initiative is a joint project between Mphasis, an IT firm, and United Way Bengaluru, an NGO focusing on health, education, environmental sustainability, rural development, and corporate volunteering.

The five police campuses chosen for the project include CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion.

Speaking at the event, the police Commissioner said, 'Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance.' Rajesh Krishnan, CEO of United Way Bengaluru, stated that the initiative aims to address climate change-related issues through percolation wells designed to capture rainwater at the point of impact.

'This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring Bengaluru's water resources, replenishing groundwater, and maintaining soil moisture to support the city's green cover,' added Krishnan.

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden, said Deepa Nagaraj, Senior Vice President and Head – ESG & CSR, Sparkle Innovation Ecosystem, and Communications. 'In the coming years, the goal is to reach approximately 225,000 beneficiaries by creating 1,200 wells by 2026,' added Nagaraj.

MPHASIS and United Way Bengaluru officially announced the launch of the "One Billion Drops" campaign at five police campuses in Bengaluru, including CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion. This year, 590 percolation wells will be constructed across these locations. The event was attended by the Commissioner of Police, Bangalore City, B Dayananda, who commended the initiative for its significant contribution to Bengaluru's water sustainability.

The "One Billion Drops" initiative addresses climate-change-related issues through percolation wells designed to capture rainwater at the point of impact. This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring Bengaluru's water resources, replenishing groundwater, and maintaining soil moisture to support the city's green cover.

"I wholeheartedly appreciate the proactive support of Mphasis and United Way of Bengaluru for coming forward to make our police campuses water-neutral through their CSR initiatives. Your commitment to sustainability is a shining example of community policing in action. Together, we are not only ensuring a greener future for our

personnel and the community but also setting a benchmark for responsible governance. Thank you for your invaluable partnership in this noble endeavour," said B Dayananda, Commissioner of Police, Bengaluru City. "Our ongoing partnership with United Way Bengaluru has empowered us to address global environmental challenges like climate change while making significant strides in reviving the state's biodiversity. The 'One Billion Drops' campaign remains a powerful initiative in rainwater conservation and sustainability, demonstrating our commitment to a greener future," said Deepa Nagaraj, Senior Vice President and Head – ESG and CSR, Sparkle Innovation Ecosystem and Communications.

"Rooted in a community-driven approach, the 'One Billion Drops' campaign represents a scalable and replicable model that promotes ecological sustainability and resilience against climate change.

By harnessing the power of collaboration between corporate entities, NGOs and government bodies, this initiative is setting a new standard for climate action and water conservation," said Rajesh Krishnan, CEO of United Way Bengaluru.

This initiative aligns seamlessly with the Prime Minister's National Water Mission initiative, "Catch the Rain, Where it Falls, When it Falls." Each percolation well can conserve up to 128,000 litres of rainwater annually, directly enhancing groundwater levels in their respective catchment areas. Once known as the Garden City, Bengaluru now faces the harsh realities of India's climate crisis, dealing with severe groundwater depletion, erratic rainfall, and a shrinking green cover. In response to these growing challenges, Mphasis, through its Corporate Social Responsibility (CSR) efforts, has partnered with United Way Bengaluru to drive an impactful campaign called "One Billion Drops".

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden. These percolation wells can conserve approximately 175,284 kiloliters of rainwater annually, making a significant contribution to the city's water resources and environmental health. These wells have benefitted 251,000 members of the community. In the coming years, the goal is to reach out to approximately 225,000 beneficiaries by creating 1200 wells by 2026.

## Catching Every Drop: Mphasis and United Way Bengaluru Collaborates to Strengthen Bengaluru's Climate Resilience

**Bengaluru, (GC) :** On September 6, 2024, Mphasis and United Way Bengaluru officially announced the launch of the "One Billion Drops" campaign at five police campuses in Bengaluru, including CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter Terrorism, CAR Headquarters, and KSRP 1st Battalion. This year, 590 percolation wells will be constructed across these locations.

The event was attended by the Commissioner of Police, Bangalore City, Mr. B Dayananda, who commended the initiative for its significant contribution to Bengaluru's water sustainability.

"I wholeheartedly appreciate the proactive support of Mphasis and United Way of Bengaluru for coming forward to make our police campuses water-neutral through their CSR initiatives. Your commitment to sustainability is a shining example of community policing in action. Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance. Thank you for your invaluable partnership in this noble endeavour," said B. Dayananda, Commissioner of Police, Bengaluru City.

"Our ongoing partnership with United Way Bengaluru has empowered us to address global environmental challenges like climate change while making significant strides in reviving the state's biodiversity. The 'One Billion Drops' campaign remains a powerful initiative in rainwater conservation

and sustainability, demonstrating our commitment to a greener future," said Deepa Nagaraj, Senior Vice President and Head – ESG & CSR, Sparkle Innovation Ecosystem and Communications.

"Rooted in a community-driven approach, the 'One Billion Drops' campaign represents a scalable and replicable model that promotes ecological sustainability and resilience against climate change. By harnessing the power of collaboration between corporate entities, NGOs and government bodies, this initiative is setting a new standard for climate action and water conservation," said Rajesh Krishnan, CEO of United Way Bengaluru.

This initiative aligns seamlessly with the Prime Minister's National Water Mission initiative, "Catch

the Rain, Where it Falls, When it Falls." Each percolation well can conserve up to 128,000 litres of rainwater annually, directly enhancing groundwater levels in their respective catchment areas.

Once known as the Garden City, Bengaluru now faces the harsh realities of India's climate crisis, dealing with severe groundwater depletion, erratic rainfall, and a shrinking green cover. In response to these growing challenges, Mphasis, through its Corporate Social Responsibility (CSR) efforts, has partnered with United Way Bengaluru to drive an impactful campaign called "One Billion Drops".

The "One Billion Drops" initiative addresses climate-change-related issues through percolation wells designed to capture rainwater at the point of impact. This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring Bengaluru's water resources, replenishing groundwater, and maintaining soil moisture to support the city's green cover.

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden. These percolation wells can conserve approximately 175,284 kiloliters of rainwater annually, making a significant contribution to the city's water resources and environmental health. These wells have benefitted 251,000 members of the community. In the coming years, the goal is to reach out to approximately 225,000 beneficiaries by creating 1200 wells by 2026.

Thank you for your invaluable partnership in this noble endeavour,” said B. Dayananda, Commissioner of Police, Bengaluru City.*

*“Our ongoing partnership with United Way Bengaluru has empowered us to address global environmental challenges like climate change while making significant strides in reviving the state’s biodiversity. The ‘One Billion Drops’ campaign remains a powerful initiative in rainwater conservation and sustainability, demonstrating our commitment to a greener future,” said Deepa Nagaraj, Senior Vice President and Head – ESG & CSR, Sparkle Innovation Ecosystem and Communications*

*“Rooted in a community-driven approach, the ‘One Billion Drops’ campaign represents a scalable and replicable model that promotes ecological sustainability and resilience against climate change. By harnessing the power of collaboration between corporate entities, NGOs and government bodies, this initiative is setting a new standard for climate action and water conservation,” said Rajesh Krishnan, CEO of United Way Bengaluru.*

This initiative aligns seamlessly with the Prime Minister’s National Water Mission initiative, **“Catch the Rain, Where it Falls, When it Falls.”** Each percolation well can conserve up to 128,000 litres of rainwater annually, directly enhancing groundwater levels in their respective catchment areas.

Once known as the Garden City, Bengaluru now faces the harsh realities of India’s climate crisis, dealing with severe groundwater depletion, erratic rainfall, and a shrinking green cover. In response to these growing challenges, Mphasis, through its Corporate Social Responsibility (CSR) efforts, has partnered with United Way Bengaluru to drive an impactful campaign called **“One Billion Drops”**.

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden. These percolation wells can conserve approximately 175,284 kiloliters of rainwater annually, making a significant contribution to the city’s water resources and environmental health. These wells have benefitted 251,000 members of the community. In the coming years, the goal is to reach out to approximately 225,000 beneficiaries by creating 1200 wells by 2026.

SEP 11, 2024

**Bengaluru, September 11, 2024:**

Mphasis and United Way Bengaluru officially announced the launch of the “One Billion Drops” campaign at five police campuses in Bengaluru, including CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion. This year, 590 percolation wells will be constructed across these locations.

The event was attended by the Commissioner of Police, Bangalore City, Mr. B Dayananda, who commended the initiative for its significant contribution to Bengaluru’s water sustainability.

The “**One Billion Drops**” initiative addresses climate-change-related issues through percolation wells designed to capture rainwater at the point of impact. This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring Bengaluru’s water resources, replenishing groundwater, and maintaining soil moisture to support the city’s green cover.

*“I wholeheartedly appreciate the proactive support of Mphasis and United Way of Bengaluru for coming forward to make our police campuses water-neutral through their CSR initiatives. Your commitment to sustainability is a shining example of community policing in action. Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance. Thank you for your invaluable partnership in this noble endeavour,” said B. Dayananda, Commissioner of Police, Bengaluru City.*

## Police campuses in Bengaluru to have 590 Percolation Wells

[news](#)

**Bengaluru, September 12th, 2024:** Mphasis and United Way Bengaluru officially announced the launch of the “One Billion Drops” campaign at five police campuses in Bengaluru, including CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion. This year, 590 percolation wells will be constructed across these locations.

The event was attended by the Commissioner of Police, Bangalore City, Mr. B Dayananda, who commended the initiative for its significant contribution to Bengaluru’s water sustainability.

The “**One Billion Drops**” initiative addresses climate-change-related issues through percolation wells designed to capture rainwater at the point of impact. This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring

Bengaluru's water resources, replenishing groundwater, and maintaining soil moisture to support the city's green cover.

*"I wholeheartedly appreciate the proactive support of Mphasis and United Way of Bengaluru for coming forward to make our police campuses water-neutral through their CSR initiatives. Your commitment to sustainability is a shining example of community policing in action. Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance. Thank you for your invaluable partnership in this noble endeavour,"* **said B. Dayananda, Commissioner of Police, Bengaluru City.**

*"Our ongoing partnership with United Way Bengaluru has empowered us to address global environmental challenges like climate change while making significant strides in reviving the state's biodiversity. The 'One Billion Drops' campaign remains a powerful initiative in rainwater conservation and sustainability, demonstrating our commitment to a greener future,"* **said Deepa Nagaraj, Senior Vice President and Head – ESG & CSR, Sparkle Innovation Ecosystem and Communications**

*"Rooted in a community-driven approach, the 'One Billion Drops' campaign represents a scalable and replicable model that promotes ecological sustainability and resilience against climate change. By harnessing the power of collaboration between corporate entities, NGOs and government bodies, this initiative is setting a new standard for climate action and water conservation,"* **said Rajesh Krishnan, CEO of United Way Bengaluru.**

This initiative aligns seamlessly with the Prime Minister's National Water Mission initiative, **"Catch the Rain, Where it Falls, When it Falls."** Each percolation well can conserve up to 128,000 litres of rainwater annually, directly enhancing groundwater levels in their respective catchment areas.

Once known as the Garden City, Bengaluru now faces the harsh realities of India's climate crisis, dealing with severe groundwater depletion, erratic rainfall, and a shrinking green cover. In response to these growing challenges, Mphasis, through its Corporate Social Responsibility (CSR)

efforts, has partnered with United Way Bengaluru to drive an impactful campaign called **“One Billion Drops”**.

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden. These percolation wells can conserve approximately 175,284 kiloliters of rainwater annually, making a significant contribution to the city’s water resources and environmental health. These wells have benefitted 251,000 members of the community. In the coming years, the goal is to reach out to approximately 225,000 beneficiaries by creating 1200 wells by 2026.

Since 2022, Mphasis has supported the creation of 1,338 percolation wells across Bengaluru, including in major parks and the iconic Lalbagh Botanical Garden. These percolation wells can conserve approximately 175,284 kiloliters of rainwater annually, making a significant contribution to the city's water resources and environmental health. These wells have benefitted 251,000 members of the community. In the coming years, the goal is to reach out to approximately 225,000 beneficiaries by creating 1200 wells by 2026.

## Police campuses in Bengaluru to have 590 Percolation Wells

Gayathri Pariti September 12, 2024 Police campuses in Bengaluru to have 590 Percolation Wells

**Bengaluru, September 12th, 2024:** Mphasis and United Way Bengaluru officially announced the launch of the “One Billion Drops” campaign at five police campuses in Bengaluru, including CAR (City Armed Reserve) North, Karnataka State Reserved Police 9th Battalion, Centre for Counter-Terrorism, CAR Headquarters, and KSRP 1st Battalion. This year, 590 percolation wells will be constructed across these locations.

The event was attended by the Commissioner of Police, Bangalore City, Mr. B Dayananda, who commended the initiative for its significant contribution to Bengaluru’s water sustainability.

The “**One Billion Drops**” initiative addresses climate-change-related issues through percolation wells designed to capture rainwater at the point of impact. This approach reduces surface runoff, prevents floods, and conserves water by slowing its flow. The campaign is pivotal in restoring Bengaluru’s water resources, replenishing groundwater, and maintaining soil moisture to support the city’s green cover.

*“I wholeheartedly appreciate the proactive support of Mphasis and United Way of Bengaluru for coming forward to make our police campuses water-neutral through their CSR initiatives. Your commitment to sustainability is a shining example of community policing in action. Together, we are not only ensuring a greener future for our personnel and the community but also setting a benchmark for responsible governance. Thank you for your invaluable partnership in this noble endeavour,” said B. Dayananda, Commissioner of Police, Bengaluru City.*

*“Our ongoing partnership with United Way Bengaluru has empowered us to address global environmental challenges like climate change while making significant strides in reviving the state’s biodiversity. The ‘One Billion Drops’ campaign remains a powerful initiative in rainwater conservation and sustainability, demonstrating our commitment to a greener future,” said Deepa Nagaraj, Senior Vice President and Head – ESG & CSR, Sparkle Innovation Ecosystem and Communications*

*“Rooted in a community-driven approach, the ‘One Billion Drops’ campaign represents a scalable and replicable model that promotes ecological sustainability and resilience against climate change. By harnessing the power of collaboration between corporate entities, NGOs and government bodies, this initiative is setting a new standard for climate action and water conservation,” said Rajesh Krishnan, CEO of United Way Bengaluru.*

This initiative aligns seamlessly with the Prime Minister’s National Water Mission initiative, **“Catch the Rain, Where it Falls, When it Falls.”** Each percolation well can conserve up to 128,000 litres of rainwater annually, directly enhancing groundwater levels in their respective catchment areas.

Once known as the Garden City, Bengaluru now faces the harsh realities of India's climate crisis, dealing with severe groundwater depletion, erratic rainfall, and a shrinking green cover. In response to these growing challenges, Mphasis, through its Corporate Social Responsibility (CSR) efforts, has partnered with United Way Bengaluru to drive an impactful campaign called **"One Billion Drops"**.
